

MTH436 - HOMEWORK 3

Solutions to the questions in Section B should be submitted by the start of class on 2/21/18.

A. WARM-UP QUESTIONS

Question A.1. Compute the derivatives (if they exist) of the following functions.

- (i) $f(x) = x^2 + 1$ if x is rational and $f(x) = 2x$ if x is irrational.
- (ii) $f(x) = x|x|$
- (iii) $f(x) = \frac{\sin(x^2)}{x}$ for $x \neq 0$ and $f(0) = 0$.
- (iv) $f(x) = x^2 \sin\left(\frac{1}{x^2}\right)$ for $x \neq 0$ and $f(0) = 0$. Prove also that f' is unbounded on the closed interval $[-1, 1]$ and so is not continuous.

Question A.2. Prove that if $f, g: I \rightarrow \mathbb{R}$ are differentiable at c then $(f + g)$ is differentiable and $(f + g)'(c) = f'(c) + g'(c)$.

Question A.3. Suppose $f: \mathbb{R} \rightarrow \mathbb{R}$ and $|f(x) - f(y)| \leq (x - y)^2$ for all $x, y \in \mathbb{R}$. Prove that f is constant.

Question A.4. Prove that the derivative of an even function is an odd function, and vice versa.

Question A.5. Let $f: [0, \infty) \rightarrow \mathbb{R}$ be differentiable and suppose that $\lim_{x \rightarrow \infty} f'(x) = M$. Find $\lim_{x \rightarrow \infty} (f(x + 1) - f(x))$.

Question A.6.

- (i) Let $f(x) = x + 2x^2 \sin\left(\frac{1}{x}\right)$ for $x \neq 0$ and $f(0) = 0$. Show that $f'(0) = 1$ but f is not increasing in any neighbourhood of 0.
- (ii) Let $f(x) = 2x^4 + x^4 \cos\left(\frac{1}{x}\right)$ for $x \neq 0$ and $f(0) = 0$. Show that 0 is a global minimum for f but for every neighbourhood V of 0 there exists $x, y \in V$ such that $f'(x) > 0$ and $f'(y) < 0$.

B. SUBMITTED QUESTIONS

Question B.1. Suppose $f: [a, b] \rightarrow \mathbb{R}$ is continuous on $[a, b]$ and differentiable on (a, b) . Let c be an interior point of I and suppose $\lim_{x \rightarrow c} f'(x) = L$. Prove that $f'(c) = L$.

Question B.2. Let $f: [0, \infty) \rightarrow \mathbb{R}$ be differentiable. Prove or disprove the following.

- (i) If $\lim_{x \rightarrow \infty} f(x) = L$ then $\lim_{x \rightarrow \infty} f'(x) = 0$.
- (ii) If $\lim_{x \rightarrow \infty} f(x) = L$ and $\lim_{x \rightarrow \infty} f'(x) = M$ then $M = 0$.
- (iii) If $\lim_{x \rightarrow \infty} f'(x) = M$ then $\lim_{x \rightarrow \infty} \frac{f(x)}{x} = M$.

C. CHALLENGE QUESTIONS

Question C.1. Let $f: [0, 2] \rightarrow \mathbb{R}$ be continuous on $[0, 2]$ and differentiable on $(0, 2)$. Suppose further that $f(0) = 0$, $f(1) = 1$ and $f(2) = 1$. Show there exists $c \in (0, 2)$ such that $f'(c) = \frac{1}{\pi}$.

Question C.2. Let $C^1[0, 1]$ be the set of functions on $[0, 1]$ for which f' is continuous. Show that

$$d(f, g) = \sup\{|f(x) - g(x)| \mid x \in [0, 1]\} + \sup\{|f'(x) - g'(x)| \mid x \in [0, 1]\}$$

defines a metric on $C^1[0, 1]$.
